1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 14-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over DE 29609570 as cited by applicant in view of Tanahashi. DE 29609570 discloses stepper motor or synchronous motor for detection of end stops; see page 3 lines 9-page 4 lines 16. DE 29609570 lacks disclosing measurement of sum of currents, by calculating end stop detection threshold relative to evolution of sum of currents. Tanahashi discloses measurement of sum of currents by calculating end stop detection threshold relative to evolution of sum of currents, see claim 2. It would have been obvious to one of ordinary skill in the art to combine the motor of DE 29609570 with Tanahashi for improved control.
